

الموضوع الأول

PART ONE: Reading

(14 pts)

Read the text carefully and do the activities.

Over the years educational models have changed in step with society, adapting to the circumstances and needs of each era. As is only logical, the educational reality today is nothing like that centuries ago.

If we go back to prehistory, the educational model, if we might call it **that**, mainly depended on the mother. Women were in charge of almost all education, while the father figure centred on more concrete aspects related to subsistence, such as hunting and survival. This was a very primary and individual system through **which** children acquired from parents the essential knowledge necessary for basic needs.

A first great change, or even revolution, came about in Sumer, Mesopotamia, in 2000 BC, when the first schools appeared, centering mainly on teaching writing, and distinguished essentially by the fact that it went a step beyond meeting everyday needs. The people benefitting from this new model were, however, limited to a privileged class.

The concept of the school as we understand it today played an important role in Ancient Greece. **It** was at this point when schools first shed their links to religious institutions. A key turning point came when in 1787 Frederick William II of Prussia enacted a scholastic code that wrested responsibility for education from the clergy and was notable for requiring all children to attend primary school, with a view to offering basic education to all of **them** as it is today.

Or

Topic 2: Write a composition of about 80-120 on the following topic:

Tell your friends how they can beat stress during exams.

PART ONE: Reading (14 pts)

Read the text carefully and do the activities.

Emotions – that is to say feelings and intuitions – play a major role in most of the ethical decisions people make. Most people do not realize how much their emotions direct their moral choices. But experts think it is impossible to make any important moral judgments without emotions.

Inner-directed negative emotions like guilt, embarrassment, and shame often motivate people to act ethically. Outer-directed negative emotions, on the other hand, aim to discipline or punish. For example, people often direct anger, disgust, or contempt at those who have acted unethically. This discourages others from behaving the same way.

Positive emotions like gratitude and admiration, which people may feel when they see another acting with compassion or kindness, can prompt people to help others.

Emotions evoked by suffering, such as sympathy and empathy, often lead people to act ethically toward others. Indeed, empathy is the central moral emotion that most commonly motivates pro-social activity such as altruism, cooperation, and generosity.

So, while we may believe that our moral decisions are influenced most by our philosophy or religious values, in truth our emotions play a significant role in our ethical decision-making.
